

```
<p class="ctf-hint">Search engines read everything... even what you don't see.</p>
```

When we're dealing with the web application mainly to find different flags; the first destination must be the View Page Source(by pressing ctrl+ U).

Here we can find this hint in paragraph tag then:

When a challenge mentions **search engines reading things you don't see**, it is almost always referring to a specific file called **robots.txt**.

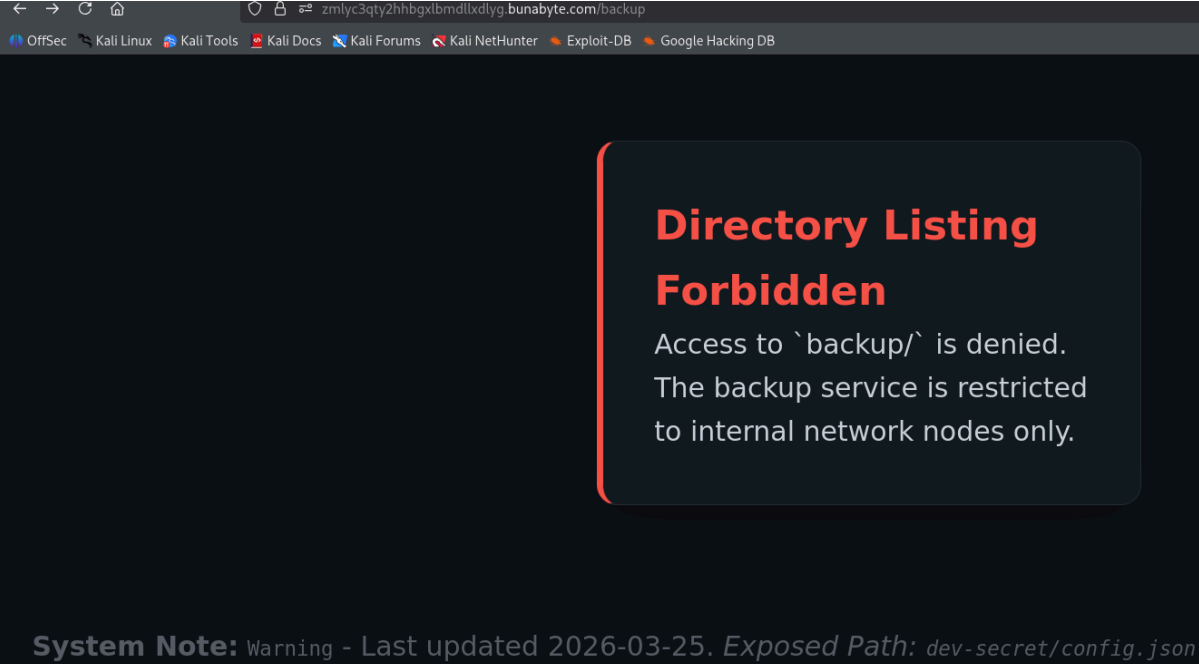

Websites use a **robots.txt** file to tell search engine crawlers (like Googlebot) which pages they are *not* allowed to look at or index. In CTFs, creators use this file to hide secret directories, admin panels, or the flags themselves.

The screenshot shows a web browser with the address bar displaying `zmlyc3qty2hhbgxlbmdllxdlyg.bunabyte.com/robots.txt`. The browser's tab bar includes links to OffSec, Kali Linux, Kali Tools, Kali Docs, Kali Forums, Kali NetHunter, Exploit-DB, and Google Hacking DB. The main content area of the browser displays the following text:

```
User-agent: *  
Disallow: /admin/  
Disallow: /backup/  
Disallow: /internal/  
Disallow: /dev-secret/
```

In “robots.txt” we can find the hidden directories also files(flag files).Then open all directories.

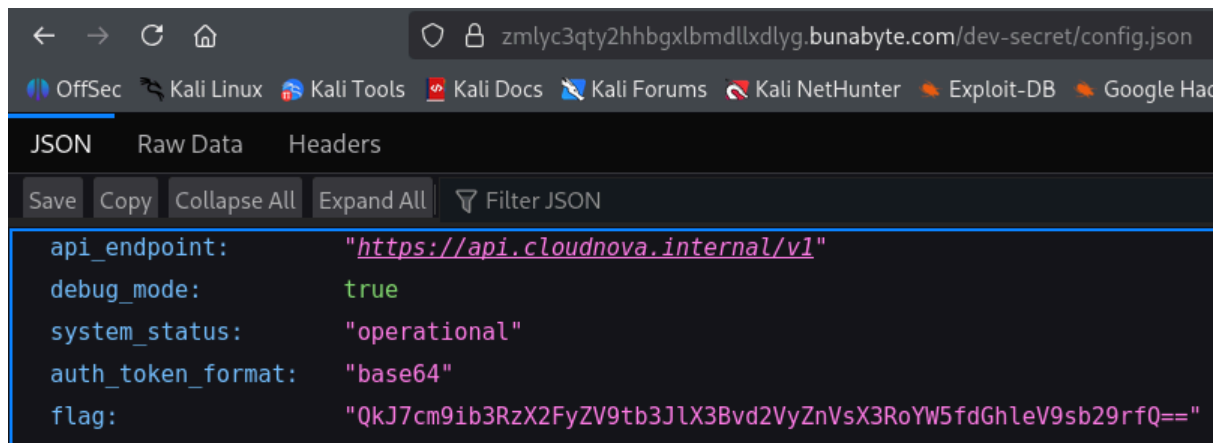

The screenshot shows a web browser with the address bar displaying `zmlyc3qty2hhbgxlbmdllxdlyg.bunabyte.com/backup`. The browser's tab bar includes links to OffSec, Kali Linux, Kali Tools, Kali Docs, Kali Forums, Kali NetHunter, Exploit-DB, and Google Hacking DB. The main content area of the browser displays a 403 Forbidden error message in a dark box with orange text:

```
Directory Listing  
Forbidden  
Access to `backup/` is denied.  
The backup service is restricted  
to internal network nodes only.
```

At the bottom of the page, there is a **System Note:** Warning - Last updated 2026-03-25. Exposed Path: `dev-secret/config.json`

In one directory from the above I can get the hint “**Exposed Path**”.

We can get the flag after decoding this.

```
$ echo "QkJ7cm9ib3RzX2FyZV9tb3JlX3Bvd2VyZnVsX3RoYW5fdGhleV9sb29rfQ==" | base64 -d  
BB{robots_are_more_powerful_than_they_look}
```
